Cosaf deliver award winning Breezair system to Ocado

Evaporative cooling is the cooling of air by the evaporation of water and can be classed as either direct or indirect. When water evaporates into the air to be cooled, simultaneously humidifying it, this is called direct evaporative cooling and is the oldest and most common form of evaporative cooling throughout the world. When the air to be cooled is kept separate from the evaporation process and therefore is not humidified as it is cooled is known as indirect evaporative cooling.

One such company who have employed a direct evaporative cooling solution are online retailers, Ocado; who are currently in the process of constructing their new £200m distribution centre in Tamworth. Said to be one of the largest and most high profile distribution centres in the UK, sufficient and accurate ventilation is vital to the wellbeing of the stock held on the premises.

World renowned Climate Wizard packs in energy efficiency for Food industry

Following on from their established relationship with Cosaf, Aimia Foods invited the HVAC specialists to create an energy efficient and environmentally responsible cooling solution for their newly developed packaging plant in Haydock.

The client required an energy efficient solution and already being a big supporter of Cosaf's Breezair evaporative cooling system, they found the 'Climate Wizard' ideal for this particular project.
